

INDOOR Intelligent Lighting Platform and Fixtures that LIGHT, SEE, THINK, CONNECT, & PROTECT

The Light that PROTECTS (Continuous and Fast Disinfection of Spaces)

J.Protect & COVID-19

Juganu Mix Wavelength Power

The COVID-19 virus is transmitted in droplets which act as a protective shield for the virus

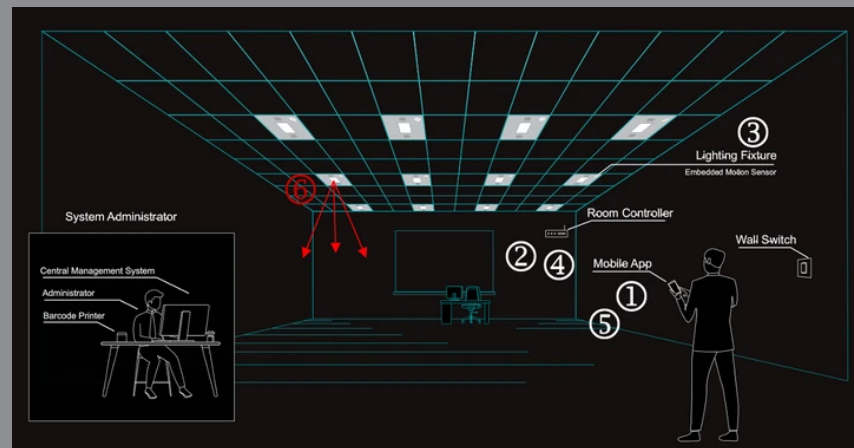

Small droplets that are suspended in the air can travel and survive for long periods of time

Juganu's J.MIX Wavelength attacks both the droplets and the virus by using multiple wavelengths at the same time

Juganu's J.Protect solutions provides volumetric cleansing to the entire illuminated area

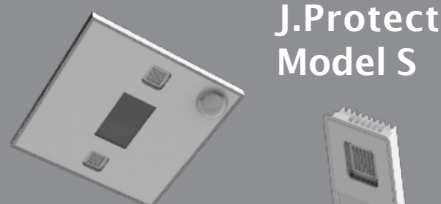

J.Protect Presto – UV-C Operation Overview

The Presto line of the Juganu J.Protect products have the capability of fast disinfection of spaces using UV-C. However, in order to activate the UV-C, where safety is our #1 concern, the process is done by an 'operator' within the space

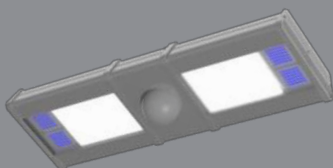

Main Benefits/Features

- Transform spaces into safe and fully connected environments.
- Lights** with Leading edge patented LED technology
- Protects** against pathogens utilizing UV-C and UV-A to disinfect spaces
- Sees** by leveraging ultrahigh sensitive sensors and cameras (optional)
- Connects** through 4G, 5G, Wi-Fi, LAN, Bluetooth, and Sigfox 0G Network
- Thinks** by using AI together with an integrated adaptive platform

J.Protect Model C

J.Protect Model H
